Weekly Status Report
10/11/16
HandOff Team

      The team met for the first time last week on 10/06. We made an internal documentation repository to keep track of project progress as well as items that need to be discussed or worked on. We chose Erin as our Project Manager and decided that everyone would be involved in multiple aspects of development with Kennan being in charge of making sure that everyone is writing thorough tests for their code. We worked on details of the SRS as well.

      This week we plan on working on the product and process description as a group, while Kennan will be responsible for the team website, Erin will be responsible for the UI diagrams, and Ian will be responsible for the use cases. Through the weekend we will further develop iterations of UI design as a group, and will look over the software design spec requirements as well. We still need to decide on what language and toolset we plan on using for this application, so we will be researching cross-platform services such as Xamarin, React Native, and Phone Gap and meet on Thursday to finalize the details of both our product and process description as a group.
